

# Science 10 Compounds Work booklet

## Part 1: Ionic Compounds

1. Complete the following table by drawing the electron dot diagram for each element. The first row is completed as an example.

Name of element	Electron dot diagram	Name of element	Electron dot diagram
carbon	$\cdot \overset{\cdot}{\underset{\cdot}{\text{C}}} \cdot$	magnesium	$\overset{\cdot}{\text{Mg}} \cdot$
oxygen	$\cdot \overset{\cdot\cdot}{\underset{\cdot}{\text{O}}} \cdot$	phosphorus	$\cdot \overset{\cdot\cdot}{\underset{\cdot}{\text{P}}} \cdot$
lithium	$\overset{\cdot}{\text{Li}}$	selenium	$\cdot \overset{\cdot\cdot}{\underset{\cdot}{\text{Se}}} \cdot$
chlorine	$\cdot \overset{\cdot\cdot}{\underset{\cdot\cdot}{\text{Cl}}} \cdot$	bromine	$\cdot \overset{\cdot\cdot}{\underset{\cdot\cdot}{\text{Br}}} \cdot$
strontium	$\overset{\cdot}{\text{Sr}} \cdot$	radon	$\cdot \overset{\cdot\cdot}{\underset{\cdot\cdot}{\text{Rn}}} \cdot$
sodium	$\overset{\cdot}{\text{Na}}$	francium	$\overset{\cdot}{\text{Fr}}$

5. Draw the missing electron dot diagrams in the following table. Refer to the periodic table as necessary.

H •						He: ••	
Li •	Be ••	B •• •	C •• •	N •• •• •	O •• •• •	F •• •• •• •	Ne: •• •• ••
Na •	Mg ••	Al •	Si •• •	P •• •• •	S •• •• •	Cl: •• •• •• •	Ar: •• •• ••
K •	Ca ••						

6. What feature of helium's energy levels justifies placing its two valence electrons in a pair? (See the table above.)

Helium only has  $2e^-$  and the first energy level can only hold  $2e^-$ . Therefore He  $1e^-$  shell/orbit IS full meaning that it is stable.

Define the following

**Ion:** the result of an atom that has lost or gained electron(s)

**Cation:** positive ion; metals become cations by losing  $e^-$

**Anion:** negative ion; non-metals become anions by gaining  $e^-$

**Ionic bond:**

the attraction between the positive charge of a cation and negative charge of anion.

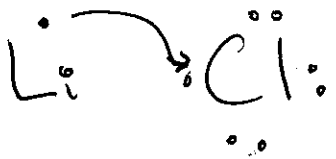

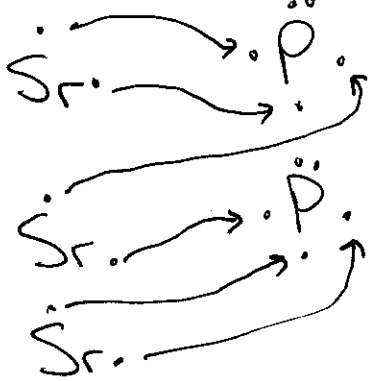

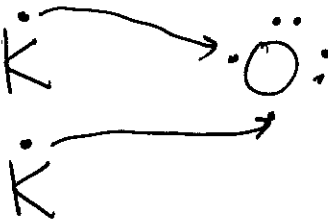

**Ionic compound:**

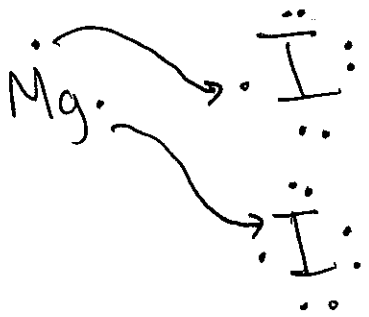

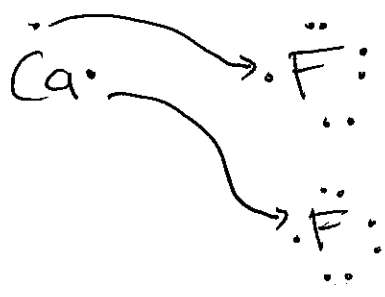

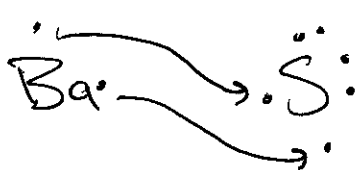

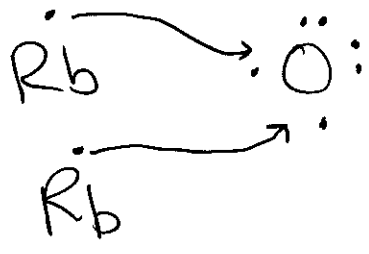

the result of a cation + anion bonded together by an ionic bond.

**How to name an ionic compound (do this after next lesson):**

1<sup>st</sup> name - cation

2<sup>nd</sup> name - anion with -ide at end.

metal atom & non-metal atom	Electron dot diagram showing exchange of electrons	Electron dot diagram of new ions formed (include the charges)	New Ionic compound formed
lithium & chlorine		$[Li]^+ \quad [Cl:]^{-}$	$LiCl$  lithium chloride
Strontium + phosphorus		$[Sr]^{2+} \quad [P:]^{3-}$ $[Sr]^{2+} \quad [P:]^{3-}$ $[Sr]^{2+} \quad [P:]^{3-}$	strontium phosphide
potassium & oxygen		$[K]^+ \quad [O:]^{2-}$ $[K]^+ \quad [O:]^{2-}$	$K_2O$  potassium oxide.

magnesium & iodine	 <p>Diagram showing the reaction of magnesium (Mg) with two iodine (I) atoms. Two arrows indicate the transfer of electrons from the Mg atom to the two I atoms, forming two iodide ions.</p>	$[Mg]^{2+} \begin{matrix} [:\ddot{I}:]^{-} \\ [:\ddot{I}:]^{-} \end{matrix}$	$MgI_2$ magnesium iodide
calcium & fluorine	 <p>Diagram showing the reaction of calcium (Ca) with two fluorine (F) atoms. Two arrows indicate the transfer of electrons from the Ca atom to the two F atoms, forming two fluoride ions.</p>	$[Ca]^{2+} \begin{matrix} [:\ddot{F}:]^{-} \\ [:\ddot{F}:]^{-} \end{matrix}$	$CaF_2$ calcium fluoride
barium & sulfur	 <p>Diagram showing the reaction of barium (Ba) with one sulfur (S) atom. Two arrows indicate the transfer of electrons from the Ba atom to the S atom, forming a sulfide ion.</p>	$[Ba]^{2+} [:\ddot{S}:]^{2-}$	$BaS$ barium sulfide
Rubidium & oxygen	 <p>Diagram showing the reaction of two rubidium (Rb) atoms with one oxygen (O) atom. Two arrows indicate the transfer of electrons from the two Rb atoms to the O atom, forming an oxide ion.</p>	$[Rb]^+ [:\ddot{O}:]^{2-}$	$Rb_2O$ rubidium oxide

Practice Problems- Part A: Binary Ionic Compounds		
	lithium chloride	LiCl
2.	potassium bromide	KBr
3.	calcium chloride	CaCl <sub>2</sub>
4.	magnesium oxide	MgO
5.	sodium fluoride Na <sup>+</sup> F <sup>-</sup>	NaF
6.	magnesium fluoride Mg <sup>2+</sup> F <sup>-</sup>	MgF <sub>2</sub>
7.	barium bromide Ba <sup>2+</sup> Br <sup>-</sup>	BaBr <sub>2</sub>
8.	aluminum chloride Al <sup>3+</sup> Cl <sup>-</sup>	AlCl <sub>3</sub>
9.	potassium fluoride	KF
10.	potassium oxide	K <sub>2</sub> O
11.	calcium oxide	CaO
12.	beryllium fluoride	BeF <sub>2</sub>
13.	lithium bromide Li <sup>+</sup> Br <sup>-</sup>	LiBr
14.	magnesium sulfide Mg <sup>2+</sup> S <sup>2-</sup>	MgS
15.	potassium nitride K <sup>+</sup> N <sup>3-</sup>	K <sub>3</sub> N
16.	aluminum oxide Al <sup>3+</sup> O <sup>2-</sup>	Al <sub>2</sub> O <sub>3</sub>

**Practice Problems- Part B: Stock System**

1.	iron (II) chloride	$\text{FeCl}_2$ $\text{Fe}^{2+} \text{Cl}^-$
2.	iron (II) oxide	$\text{FeO}$ $\text{Fe}^{2+} \text{O}^{2-}$
3.	iron (III) oxide	$\text{Fe}_2\text{O}_3$ $\text{Fe}^{3+} \text{O}^{2-}$
4.	iron (III) bromide	$\text{FeBr}_3$ $\text{Fe}^{3+} \text{Br}^-$
5.	actinium (III) oxide	$\text{Ac}_2\text{O}_3$ $\text{Ac}^{3+} \text{O}^{2-}$
6.	copper (II) chloride	$\text{CuCl}_2$ $\text{Cu}^{2+} \text{Cl}^-$
7.	gold (III) chloride	$\text{AuCl}_3$ $\text{Au}^{3+} \text{Cl}^-$
8.	lead (IV) oxide $\text{Pb}^{4+} \text{O}^{2-}$ $\text{Pb}_2\text{O}_4$	$\text{PbO}_2$
9.	nickel (III) bromide $\text{Ni}^{3+} \text{Br}^-$	$\text{NiBr}_3$
10.	cobalt (II) chloride $\text{Co}^{2+} \text{Cl}^-$	$\text{CoCl}_2$
11.	chromium (III) oxide $\text{Cr}^{3+} \text{O}^{2-}$	$\text{Cr}_2\text{O}_3$
12.	molybdenum(IV) chloride $\text{Mo}^{4+} \text{Cl}^-$	$\text{MoCl}_4$
13.	gold(II) sulfide $\text{Au}^{2+} \text{S}^{2-}$	$\text{AuS}$
14.	palladium(III) phosphide $\text{Pd}^{3+} \text{P}^{3-}$	$\text{PdP}$

**Part C: Polyatomic Ions**

1.	calcium hydroxide $\text{Ca}^{2+} \text{OH}^-$	$\text{Ca}(\text{OH})_2$
2.	potassium chlorate $\text{K}^+ \text{ClO}_3^-$	$\text{KClO}_3$
3.	calcium sulfite $\text{Ca}^{2+} \text{SO}_3^{2-}$	$\text{CaSO}_3$
4.	copper (II) hydroxide	$\text{Cu}(\text{OH})_2$ $\text{Ca}^{2+} \text{OH}^-$
5.	sodium nitrate	$\text{NaNO}_3$ $\text{Na}^+ \text{NO}_3^-$
6.	potassium phosphate	$\text{K}_3\text{PO}_4$ $\text{K}^+ \text{PO}_4^{3-}$
7.	magnesium sulfate $\text{Mg}^{2+} \text{SO}_4^{2-}$	$\text{MgSO}_4$
8.	potassium carbonate $\text{K}^+ \text{CO}_3^{2-}$	$\text{K}_2\text{CO}_3$
9.	ammonium sulfate $\text{NH}_4^+ \text{SO}_4^{2-}$	$(\text{NH}_4)_2\text{SO}_4$
10.	sodium hypochlorite	$\text{NaClO}$ $\text{Na}^+ \text{ClO}^-$
11.	cobalt (II) nitrate.	$\text{Co}(\text{NO}_3)_2$ $\text{Co}^{2+} \text{NO}_3^-$

Review Practice

Name: KEY.

Practice ALL

Name that ionic compound:

1	strontium sulfide.	SrS
2	magnesium iodide	MgI <sub>2</sub>
3	zinc chloride	ZnCl <sub>2</sub>
4	silver nitride	Ag <sub>3</sub> N
5	strontium fluoride	Sr F <sub>2</sub>
6	scandium phosphide.	ScP
7	actinium oxide.	Ac <sub>2</sub> O <sub>3</sub>
8	potassium carbonate	K <sub>2</sub> CO <sub>3</sub>
9	gold (III) chloride.	AuCl <sub>3</sub>
10	cobalt (II) nitrate.	Co(NO <sub>3</sub> ) <sub>2</sub>
11	nickel (III) bromide	Ni Br <sub>3</sub>
12	potassium phosphate.	K <sub>3</sub> PO <sub>4</sub>
13	copper (II) chloride	CuCl <sub>2</sub>
14	ammonium sulfate	(NH <sub>4</sub> ) <sub>2</sub> SO <sub>4</sub>
15	sodium hypochlorite.	NaClO
